Natural Regulation of Animal Populations

By Ian A. McLaren

Aldine Transaction. Paperback. Book Condition: New.

Paperback. 195 pages. Dimensions: 8.8in. x 6.0in. x

0.6in. Surveying an area dense with conflicting observations

and ideas, this volume vividly depicts the current state of

knowledge as well as the great diversity of opinion in the field

of population ecology. Ten papers by outstanding authorities

focus on three main issues—the effects of environment and

population density on population dynamics, the influence of

animal behavior on population growth, and the possibilities of

genetic feedback or short-term evolutionary change in control

of animal populations. An incisive introduction by the editor

establishes a frame of reference and supplies succinct

resolutions of some of the important controversies dealt with

in these pages. Choosing from a vast literature that has been

polemical, often confusing, and at times acrimonious, the book

offers several classic arguments that clarify the functional,

statistical, and evolutionary aspects of the relationship of

population density to population growth. M. E. Solomon lays

the groundwork for the ensuing debate by classifying the terms

and relevant concepts of density-dependence as they apply to

population dynamics. Other probing articles questions whether

the density of animal populations is actually regulated by

particular mechanisms or by random chance, provide

counterexamples of...
